Subject: Ameritech Illinois Adherence to Industry Standards

Sam,

Per our conversation this morning, Ameritech Illinois will commit that the standards used for the changes, that will be introduced via the Plan of Record, for ordering and pre-ordering interfaces will be at a minimum LSOG 4 (EDI10) and that the Billing interface will be EDI 811 version 4010 (as stated in the Plan of Record). The reference to deviations from the standard was addressed in the letter from Terry Larkin because it an issue addressed last week at the Ohio OSS collaborative. Below is the wording that was agreed to by both Ameritech and the CLECs and will be added as an addendum to the Ohio implementation plan.

"SBC Ameritech will use the most recent documented standard with allowances for deviations from that standard as agreed upon by CLECs and SBC through the Change Management Process (CMP) process. The CMP will also address which version of the standard will be implemented."

It is assumed that the CLECs will continue to support this position and that this issue will be a topic for discussion during the collaborative.

Attached you will also find a copy of the Ameritech Change Management Process that we are committed to following until the 13-state process is implemented.

Joe Rogers
